Rob Allen's Updated Zend Framework Tutorial

I'm a few days late in getting around to reading it... Rob Allen has updated his excellent tutorial for the Zend Framework 0.20 release over on <http://www.akrobat.com/zend-framework-tutorial>.

As he notes in his [blog entry](#), he only needed to make some small changes (including his updated Zend_Config use) to migrate the tutorial from the 0.15 to 0.20 version of the framework. Version 1.1 of the tutorial is a must read if you're looking for an easy to access introduction to the Zend Framework.

Rob is the guy to blame if you ever have any Zend_Config issues
